(54) Title: APPARATUS FOR MEDIATING IN MANAGEMENT ORDERS
(57) Abstract: A method and an apparatus for mediating in management orders between a plurality of origin managers and a plu-
rality of managed devices in a telecommunications system. The apparatus comprises: a Communication Receiver Component (201)
arranged for receiving management orders, a Communication Sender Component (203) arranged to send an allowed management
order to a managed device, and a Management Verifier Component (202), arranged to determine whether a received management
order is an allowed management order. The Management Verifier Component checks whether a received management order fits with
the access attributes comprised in one, or more, management access templates. A management access template is selected accord-
ing to its relationship with an identifier of the origin manager sending the order, and/or with an identifier of a managed data object
affected by said order, and/or with an identifier of a managed device affected by said management order.
